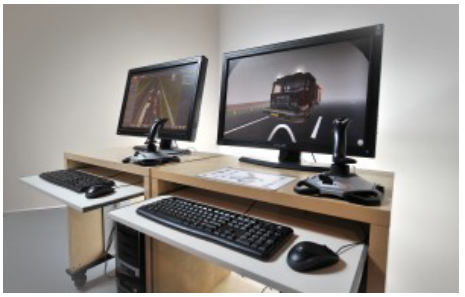
CANADIAN AWARDS FOR TRAINING EXCELLENCE
WINNER 2015

XVR

Custom-built incident and emergency preparedness scenarios developed for your policies, procedures and risks.

Hands-On Training

The XVR incident command system allows participants to see the outcome of their on-scene decisions. The system is designed to help prepare for real world incidents in a simulated environment.



Linked or Stand-Alone

Multiple scenarios can be linked together to enable a crew (up to 99 participants in the same exercise) to train together. Scenarios can also be built for standalone for one individual participant.

Hardware Integration

As an additional feature, the XVR system can operate with our virtual-reality driving simulators, enabling the participant to experience the situation from call-out to on-scene command.

Immersive 3D Environment

Situations can take place at any number of 3D environments, including: residential houses, high-rise apartments, offices, warehouses, industrial areas, roads, railways, chemical plants, airports, border crossings, harbours, city centres, tunnels, campsites etc.

Interagency Training

Scenarios designed to allow representatives from multiple agencies to coordinate and collaborate on scene management.

System available for purchase or DriveWise can facilitate your training.
